	TekData Snap 	Direct integration with Snap via meta-data imports.
	MARC Records (General)	Export MARC records for importing into any other system via the Infobase admin portal.

Access Methods

<p>IP Authentication</p>	<p>IP address authentication makes it so anyone coming from your institution's IP address or range would not need to log in to access your Infobase subscriptions.</p>
<p>Referring URL</p>	<p>If your users are already logging in to a password protected page before accessing your Infobase subscriptions, we can use referring URL authentication to make sure they don't have to log in twice.</p>
<p>Barcode</p>	<p>Barcode authentication is primarily a "remote user" or "off campus" authentication solution. Many Libraries issue their patrons a barcode/membership number. To enable this method of authentication you will need to supply the barcode number pattern. Often it looks like the following: 25501xxxxxxxxxx.</p>
<p>Single Sign-On (SSO)</p>	<p>By passing several key parameters in conjunction with your Account Specific Access URL, users can be logged in automatically to their personal user accounts or have a new user account created for them with SSO.</p>
<p>LDAP</p>	<p>The Lightweight Directory Access Protocol (LDAP) is an open, vendor-neutral, industry application protocol for accessing and maintaining distributed directory information services over an Internet Protocol (IP) network.</p>
<p>Search API</p>	<p>Utilize our search API to allow users to query the product on-demand and gain immediate access to content.</p>
<p>Record URLs</p>	<p>Record URLs are available on every page and allow direct access to content.</p>
<p>Embed Codes</p>	<p>Three different sizes of embed code are available on every page and allow direct access to content.</p>
<p>Usage Booster Widgets</p>	<p>Colorful widgets are available within the admin portal to help promote this research and allow searching.</p>
